EDUCATION

Toronto Metropolitan University (formerly Ryerson University)

Bachelor of Science in Computer Science, Co-op

- Faculty of Science Deans List: 2022 – Present

Toronto, Ontario

Sep 2022 – Apr 2027

EXPERIENCE

Software Engineer: Full Stack Intern

Super.com

Jan 2026 – Present

San Francisco, CA

- Delivered **P0** full-stack features using TypeScript, XState state machines, and Flask/gRPC services powering core hotel booking and payment flows
- Planned and executed secure consolidation of two PostgreSQL booking tables with **7M+** records using incremental migration strategies (dual writes, backfill) with zero downtime
- Designed backend systems using Protocol Buffers, SQLAlchemy, and JSONB metadata to support scalable booking data enrichment
- Built and operated experimentation and observability workflows using Datadog and Amplitude, supporting fintech services at **1,000+** req/s
- Wrote production-ready code and deployed with GitLab CI/CD on AWS Kubernetes infrastructure, maintaining **99.9%+** uptime

Software Engineer: Backend & Automation Intern

IBM

May 2024 – Aug 2025

Toronto, ON

- Developed and tested software for IBM Supply Chain Intelligence Suite using a Microservices Architecture with Java, Spring Boot, Kafka, Redis, and Cassandra
- Engineered microservices designed to simplify user access control and group management within the software. The microservices streamlined the process of assigning users to groups, managing permissions and ensuring secure access to features and data
- Designed, developed, and deployed a Kafka monitoring microservice using Kubernetes on IBM Cloud and Docker, enabling real-time consumption and tracking of over **5 million** events daily across **10+** microservices. Reduced manual monitoring efforts by **40%** and integrated the service with Instana dashboards through REST APIs, providing actionable insights into microservice health and performance
- Implemented and optimized REST APIs with pagination, caching, retry logic, and JWT authentication, improving scalability, security, and reducing response times by **65%**
- Created unit and integration tests using JUnit, Mockito, and Karate, and automated testing pipelines with Jenkins to ensure API reliability

Software Engineer: Full Stack

deepidv

Sep 2025 – Dec 2025

Toronto, ON

- Developed full-stack features across React applications and Node.js/Python serverless backends using AWS CDK, Lambda, S3, and Step Functions, including an AI-powered customer support chatbot built with Amazon Nova Pro and FastAPI that served **500+** active users, automated context-enriched bug reporting, and improved bug report resolution efficiency by **50%** across **1,000+** daily verification sessions

PROJECTS

SchoolMule: AI Student Management | TypeScript, Next.js, Node.js, Express, PostgreSQL

September 2024

- Developed a full-stack web application using TypeScript, Next, Node and Express, enabling schools to manage student records, track grades, and generate automated report cards, reducing administrative workload by over **2000** hours annually
- Orchestrated adoption by **4** underfunded private schools with over **2,000+** students, handling end-to-end deployment and infrastructure on AWS; migrated and validated legacy student data, delivered hands-on training workshops and tailored user guides and demos for over **150** teachers

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML/CSS, TypeScript, C/C++, SQL, Rust, Bash

Frameworks: Spring, Spring Boot, Flutter, React, Next.js, Angular, Node.js, Express, Flask, Django, GraphQL

Developer Tools: Git, Docker, AWS, Jenkins, Kafka, Redis, Kubernetes, Linux/UNIX
